Phosphorus content	mg/kg	-	4,0	EN 16294

Notes

a See 5.5.1. in EN 14214:2012+A1:2014.

b Density may be measured over a range of temperatures from 20 °C to 60 °C. Temperature correction shall be made according to the formula given in Annex B in EN 14214:2012+A1:2014.

c See 5.5.2. in EN 14214:2012+A1:2014

d If CFP is • 20 °C or lower, the viscosity shall be measured at • 20 °C. The measured value shall not exceed 48 mm<sup>2</sup>/s. In this case, EN ISO 3104 is applicable without the precision data owing to non-Newtonian behaviour in a two-phase system.

e See Annex A for precision data in EN 14214:2012+A1:2014.

f Procedure A shall be applied. Only a flash point test apparatus equipped with a suitable detection device (thermal or ionisation detection) shall be used.

g A 2 ml sample and apparatus equipped with a thermal detection device shall be used. See also 5.5.2. in EN 14214:2012+A1:2014

h See 5.5.3. in EN 14214:2012+A1:2014

i An additional determination method has been developed by CEN, but first needs to be assessed for actual field performance prediction [3].

j For use as an extender to diesel fuel Table 3 applies in EN 14214:2012+A1:2014.

k A lower limit may come into force after validation by work on the measurement standard precision.

l A lower limit of 2,5 mg/kg may come into force after validation work on the measurement standard and on engine oil impacts.
